👤 SUMMARY

Backend and cloud engineer with 3+ years building and operating production systems for Japanese enterprise clients. Principal author of four production backends (Laravel, Django) and sole author of the Terraform and AWS CDK infrastructure that deploys them. Recent work centres on production LLM and agent systems — multi-agent orchestration, RAG over vector databases and computer-vision inference services — alongside large-scale video streaming and subscription billing. First employee of the company; promoted from junior engineer to team lead in under three years.

🔧 TECHNICAL SKILLS

- **Languages:** PHP (Laravel 9–12) | Python 3.12 (Django/DRF, FastAPI) | TypeScript/JavaScript | SQL | C/C++ | Dart
- **AWS:** EC2, ECS, Lambda, S3, RDS (MySQL/Aurora/PostgreSQL), SQS, SNS, MediaConvert, CloudFront, ALB & Auto Scaling, VPC/IAM, Secrets Manager, SSM, CloudWatch, CodePipeline/CodeBuild/CodeDeploy, ECR, ElastiCache, DynamoDB
- **Infrastructure:** Terraform | AWS CDK (TypeScript) | Docker & Compose | Nginx | Supervisor | Linux | CI/CD pipeline design
- **Async & Realtime:** Celery (SQS/Redis), Laravel Queues on SQS, Procrastinate, scheduler design, WebSockets (Django Channels, Pusher)
- **Data & Search:** MySQL, PostgreSQL, Redis, Elasticsearch, Weaviate (vector), OpenSearch/Kibana
- **AI Systems:** OpenAI, Anthropic, LangChain, LangGraph, Agno, LiteLLM, MCP, self-hosted Dify | RAG & vector search | prompt engineering | PyTorch / Vision Transformer inference | speech-to-text (Amazon Transcribe, Google Cloud Speech, ElevenLabs)
- **Integrations:** Stripe | Firebase/FCM & Firestore | LINE Messaging API & LINE Login (OIDC) | Google Business Profile | Instagram & Facebook Graph | Google Ads | GA4 | SendGrid
- **Practices:** REST API design, OpenAPI/Swagger, OAuth2 & JWT, RBAC, repository/service architecture, PHPUnit & pytest, code review, Japanese engineering practice (Hou-Ren-Sou)

🏢 PROFESSIONAL EXPERIENCE

JB Connect Ltd. [🔗](#) — Dhaka, Bangladesh (Japanese-owned software company)

Apr 2023 – Present

Senior Software Engineer & Team Lead — Backend & Cloud

- Joined as the company's first employee; promoted twice and appointed team lead within three years, owning backend architecture and cloud infrastructure across the company's product portfolio.
- Led project delivery end-to-end — architecture and schema design, code review, release management and client-facing requirement work with Japanese stakeholders.

Recruitment Platform with Video Profiles

Laravel 12, MySQL, Redis, AWS · 2023–2026

- Sole backend author of a platform serving Flutter iOS/Android apps and a React web client, in continuous production for over two years.
- Architected the asynchronous tier — SQS-backed queue jobs and a dedicated batch fleet running the scheduler under Supervisor, with Auto Scaling Group leader election so scheduled work executes exactly once across a scaling fleet.
- Built S3 → MediaConvert → CloudFront video delivery (1080p/720p/360p HLS), Stripe subscriptions and invoicing, Elasticsearch-backed search, FCM push and Pusher real-time messaging.
- Authored the AWS CDK infrastructure and the CodePipeline/CodeDeploy release process across development, staging and production tiers.

SaaS Automation Agent Platform

Django 6, DRF, PostgreSQL, Terraform, Dify · 2026

- Sole author of the API and of the Terraform infrastructure for a platform automating routine SaaS operations through agent-driven workflows.
- Selected Procrastinate (PostgreSQL as queue) over Celery after a documented evaluation, satisfying a runtime schedule-change requirement while removing the message broker from the architecture entirely.
- Built LINE Messaging API webhooks and LINE Login (OIDC) account linking with a human-in-the-loop approval workflow; deployed a self-hosted Dify agent engine on ECS to keep client data inside the company's own AWS account.

Multi-Agent Sales & Knowledge Assistant

Django REST, FastAPI, LangGraph/Agno, Weaviate · 2025–2026

- Core contributor to the API and agent service of an AI assistant for a Japanese optics manufacturer; sole author of its AWS CDK infrastructure.

- Built an orchestrator-plus-specialist agent topology (product, SQL, web-search and emailer agents) over OpenAI and Anthropic models via LiteLLM, grounded in RAG over a Weaviate vector store, with a Celery-on-SQS tier for long-running tasks.

Short-Drama Streaming Service

Laravel 12, Docker, MediaConvert, AWS CDK · 2025–2026

- Principal backend and sole infrastructure author: series/episode domain with playback sequencing, favourites and watch history, plus a MediaConvert HLS pipeline reconciled by SNS callbacks.

Leather Repair Estimation AI

FastAPI, PyTorch (ViT), OpenAI, AWS · 2025

- Inference service pairing a Vision Transformer damage model and product classifier with LLM brand and comment analysis to produce automated repair cost estimates; authored the CDK stack and deploy pipeline.

Store Marketing & Local-SEO SaaS

Laravel, React, MySQL, AWS · 2023–2024

- Delivered SMS gateway integration with encrypted credential storage, listing-directory linkage and review collection on a multi-tenant platform running some 50 scheduled sync jobs across Google Business Profile, Instagram, Facebook, LINE and Google Ads.

Enterprise File-Sharing & Logistics Systems

Nextcloud/PHP, Laravel, React Native · 2024–2025

- Customised a Nextcloud-based enterprise platform to Japanese design specifications — retention-based forced deletion, parallelised file scanning, HR-data integration and audit logging — and built the in-house iOS reader app in React Native.

EDUCATION

Military Institute of Science and Technology (MIST) — Dhaka, Bangladesh

2019 – 2023

B.Sc. in Computer Science & Engineering · CGPA 3.69 / 4.00 · Dean's List of Honour (2020)

RESEARCH & PUBLICATIONS

- **Footwear 3D Model Generation from Smartphone 2D Images Utilizing Photogrammetry** — [IEEE](#) 
Proposes an affordable photogrammetry-based method for producing 3D representations of footwear from consumer smartphone images.
- **Identifying Design Guidelines of Interactive Whiteboard Interfaces Through Usability Evaluation** — [Springer](#) 
Evaluates interactive whiteboard interfaces to surface usability problems and derive design guidelines for embedded systems.
- **A Conceptual Framework of an Automated Mosquito Control in Drainage Systems for Combating Dengue in Bangladesh** — [IEEE ICCIT 2023](#) 
Automated detection framework achieving over 80% success across all measured performance parameters.
- **Developing a Deep Learning-based AR Shoe Try-on App with 3D Shoe Modeling from Smartphone Images** — Undergraduate thesis.
3D modelling via photogrammetry, foot keypoint estimation with ResNet-50, and augmentation of 3D objects in 2D space using ARCore.

INDEPENDENT PROJECTS

- **Nirbaan Express Courier** (2022) — e-courier platform shipped to production for a commercial client: Laravel backend, Flutter web and Android apps, published on Google Play.
- **Agro-Drone** (2023, capstone) — custom drone with FPV capture feeding a machine-learning and computer-vision pipeline (Python, Flask, Node.js, MongoDB) to detect plant disease, deforestation and river erosion.
- **QR-Contact** (2022) — Flutter application for generating and reading QR-encoded business cards; published on both Google Play and the App Store.
- **Foodonation** (2020) — Flutter food-donation platform; second-largest contributor on a five-person team.

INTERNATIONAL ACHIEVEMENTS

- **Champion** — **University Rover Challenge 2021**, Utah, USA. Led the software and communication team representing Bangladesh.
- **2nd Runner-up** — **Anatolian Rover Challenge 2022**, Istanbul, Turkey.

COMPETITIVE PROGRAMMING

- **ACM ICPC Asia Dhaka Regional** — on-site finalist, 2021 and 2022.
- 1,000+ problems solved across online judges and on-site contests; problem setter and tester for national and inter-university programming contests.
- Top 15 of 400+ teams, DU Code Samurai Hackathon 2022 · 1st Runner-up, Mobile App Contest, Inter-University ICT Innovation Fest 2021.
